

INTRODUCING

New Duplication service for USB Flash Drives

ISD has installed commercial duplication equipment for rapid and inexpensive duplication of these devices.

The duplication process is superior to simply using multiple USB hubs on a PC and copying files to the device as it offers the following advantages:

- **Simultaneous duplication to multiple devices**
- **True binary copy with full verification of both data and unused memory areas**
- **Not operating system dependent. Can copy the contents of any device.**
- **Test pattern can be written across entire device for quality evaluation**
- **This equipment will allow us to offer our customers fast and inexpensive duplication of data onto a wide variety of device types**

Using USB Flash Drives to promote your business

Have you considered using USB Flash drives or MP3 players as promotional items? We can supply a range of USB devices printed with your company logo. In addition, we can duplicate your promotional material, or catalogue on the drive making it an attractive gift for your customers which carries your message to your customer. Unlike CDs and DVDs, they WILL look at the content material as the device has a useful value to the customer for data storage. We can make the device autoboot with protected areas so that your company logo will appear every time the device is inserted in the PC, even if the customer deletes the promotional material.
